

Technical Support Service- Windows- Part 2

6. Slow and freezing PC

User: My computer is very slow when starting applications.

Support: Advise disabling startup programs, checking disk and memory usage, and running disk cleanup.

7. Suspected malware

User: My PC is displaying pop-ups and strange behavior.

Support: Recommend running a full scan with Windows Defender or a reliable antivirus and using malware removal tools.

8. Brightness or dark screen

User: My laptop screen is too dark, even at maximum brightness.

Support: Ask to check power settings, video drivers, and calibrate the brightness in Windows settings.

9. Software installation failure

User: I can't install a program, I get an installation error.

Support: Advise running as administrator, checking compatibility, and temporarily disabling the antivirus.

10. Problems with video drivers

User: After a Windows update, the video card has a driver error.

Support: We recommend reinstalling the driver, using Driver Verifier, and restoring a previous driver version.
